

**LANTERN REFURBISHMENT  
AND RETROFIT**

We offer a full refurbishment service in addition to manufacturing new and bespoke lanterns.

Lanterns are glass bead blasted to remove old paint, dirt and debris prior to refinishing. Once refinished, the lanterns will be re-glazed to improve the water ingress rating, in most cases IP65, although we have other glazing options. This refurbishment service is ideal for assets that may have not served many years but are starting to look tired.

We can repair minor damage to the lantern enclosure or brackets. Occasionally, the damage to the lanterns is so extensive that it would need to be rebuilt from new. We can create a bespoke lantern that replicates your original.

When the lanterns are refurbished, it is a great opportunity to upgrade the gear with our LED retro fit service to improve the energy efficiency and longevity of your lanterns.
