STREET FURNITURE AND LIGHTING

## COLUMN REFURBISHMENT

Your columns can be restored at our manufacturing facility where they would be shot blasted to remove old paint and rust. They are then etch primed and doors can be cut, if necessary, as well as any other enhancements before installation and painting on site.

Columns can also be restored on site where paint is removed carefully by hand. They are then re painted with a zinc rich etch primer (HBZP) and JC12 high gloss paint in your choice of colour. Cut doors can be added to retrofit electrics into heritage columns on site.

If your column has stress fractures, breaks or cracks, we can repair them with a new galvanised steel internal core. The core will reinforce the weakened column, making it safe for street usage. This is an ideal option if your column is unique or difficult to replace.

### OPTIONS

- + Doors fitted or made to requirements
- + Steel core reinforcement
- + Shot blast to bare metal
- + Painted in a choice of colour or finish
- + Door cut outs
